User Portal

3. Navigate to VPN on side menu and click on [Download configuration for other OSs](#) under **SSL VPN Client** Container

Home

Personal

Download client

**VPN**

Internet usage

Email

Logout

Sophos Connect client [IPsec and SSL VPN]

Download client for Windows

Download client for macOS

**SSL VPN client**

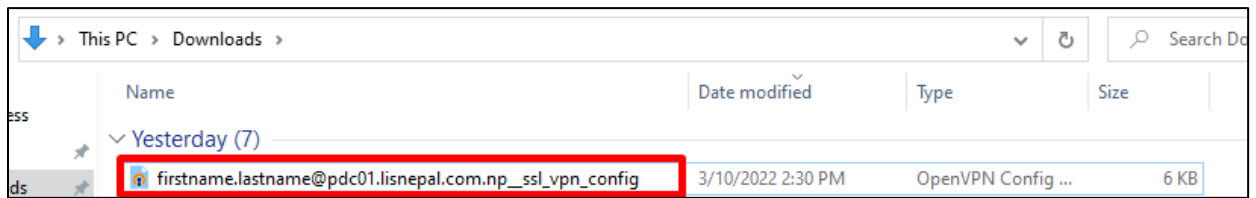

Download client and configuration for Windows

Download configuration for Windows

**Download configuration for other OSs**

Download configuration for Android/iOS

The configuration file will be downloaded into your Downloads Folder with .ovpn extension

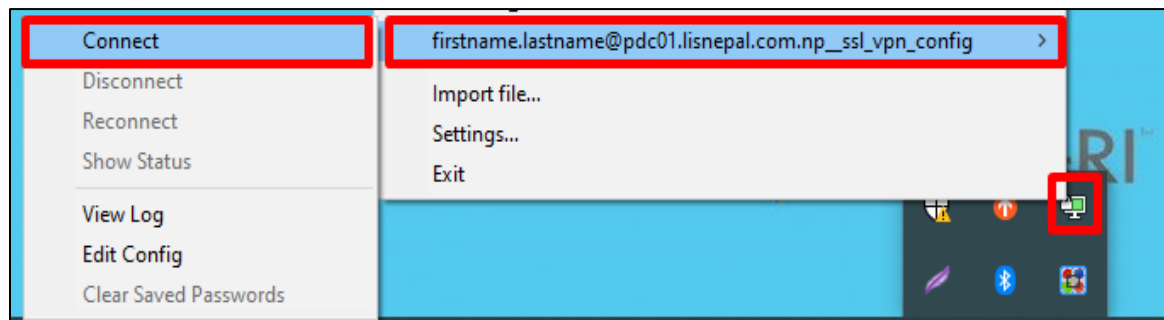

Note: The .ovpn file can be renamed to any desired name.

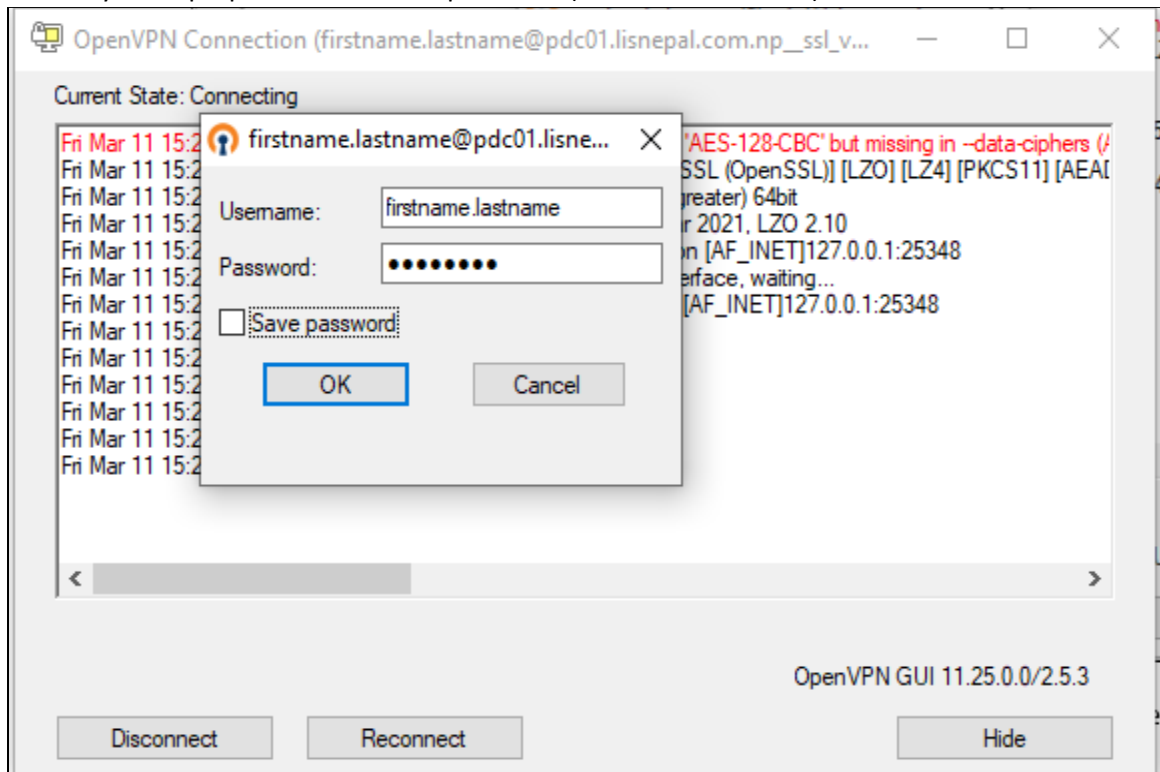

4. Copy the configuration file to the location **C:\Program Files\OpenVPN\config**
5. Open the Open VPN GUI icon which will run the VPN client at icon tray

6. Right click on the VPN icon on the icon tray, hover on the config file you imported earlier and click connect

7. Provide your Laptop's username and password (Domain Credentials) to connect to VPN.

With correct credentials and an active internet connection, the VPN will be connected and ready to use.
